

Selected Marketing Copy Samples: Turning Product Details Into Buyer Decisions

These samples show how I approach copy when the product has real mechanics behind it: find the user's hesitation, name what the product actually changes, and make the claim clear without stretching it.

EXPERIENCE

13 months of hands-on brand-copy experience, with adjacent work in digital marketing, product development, and audience-facing writing.

TOOLS

AI research workflows, local AI, Google Analytics, Canva, Photoshop, Premiere Pro, Vercel, email APIs, and product prototyping.

FOCUS

Product clarity, buyer hesitation, claim discipline, and messaging that earns the next read.

These samples were prepared for this application, but they are based on real projects, prior writing work, and product decisions I have actually made. They are not presented as published client campaigns.

DRESS-UP: Turning a Technical Fit Workflow Into Buyer Confidence

USER PROBLEM

Shoppers often lose confidence in two places: in store, where trying another size or combination costs time; and online, where a product photo still does not answer the practical question, "Will this work on me?"

GOAL + AUDIENCE

Present DRESS-UP as a decision tool, not just a virtual fitting feature, for mobile shoppers who want outfit confidence before a store visit or checkout.

FINAL COPY

Make the fitting room your last stop.

Build editorial outfit combinations on a personalized 2.5D body preview, compare your strongest options, and save a shareable lookbook before the fitting room or checkout.

Preview the Whole Look

Style pieces on a personalized 2.5D body preview to judge proportion, layering, and overall vibe before trying anything on.

Compare the Maybes

Place outfit options side by side, swap pieces quickly, and narrow uncertainty into a stronger shortlist.

Save the Lookbook

Keep favorite combinations, share them for a second opinion, and bring a more decided set of looks into the fitting room or checkout flow.

Your cart deserves a second opinion.

Save the strongest looks and share them before the checkout decision gets expensive.

See the look before you buy the look.

Move from product photos to outfit decisions with less guessing.

Less changing-room math. More confident choices.

Build the shortlist before the fitting room becomes the starting point.

WHY THIS IMPROVES MESSAGING

The original feature idea could sound like another virtual fitting tool. This version sells the behavioral shift: make the fitting room a confirmation step, not the discovery step.

RELEVANCE TO BIS

This sample shows how I turn multi-step product functionality into a clearer user decision. LMS, training records, digital forms, and compliance workflows all need copy that makes the risk, action, and outcome easy to understand.

HANBYUL: Making Ordinary Visuals a Trust-Building Brand Position

USER PROBLEM

Many men who like Korean casual style still hesitate because fashion content can feel too polished, too model-driven, or too far from daily life.

GOAL + AUDIENCE

Make Hanbyul feel approachable to men in Canada who want cleaner outfits without feeling intimidated by fashion, trends, or a new persona.

FINAL COPY

Dress better. Don't become a fashion guy.

Hanbyul makes Korean menswear feel wearable for Canadian men who want cleaner outfits without a new personality: everyday photos, lightly styled looks, and clothes shown the way they will actually be worn.

You don't need a fashion era. You need one better outfit.

Hanbyul shows Korean menswear in regular settings, with simple styling that makes upgrading feel easy to copy.

If fashion stores make you feel underqualified, start here.

Clean Korean menswear for Canadian men who want to dress better without decoding trends first.

Looks good in a mirror selfie. That's the point.

No perfect lighting, no overstyled set. Hanbyul shows clothes in real-life conditions so men can trust what they are buying.

BRAND PARAGRAPH

Hanbyul is clean, simple Korean menswear for men in Canada who want to look more put together without overthinking clothes. The styling stays practical: casual pieces, easy combinations, and outfits that still make sense outside a shoot.

WHY THIS IMPROVES MESSAGING

The message reframes ordinary photos as evidence, not a production compromise. It names the real barrier: the customer is not anti-style; he is anti-intimidation, anti-performance, and anti-overcommitment.

RELEVANCE TO BIS

This sample shows the same messaging judgment BIS needs in product copy: identify the buyer's hesitation, avoid over-polishing the claim, and turn a perceived weakness into a clearer reason to trust the product.

How I Would Approach BIS Copy

This is not presented as live BIS copy. It is a short demonstration of how I would translate public-facing product details into buyer-facing messaging, then validate product accuracy internally before use.

Find training gaps before they turn into delays.

Assign training by role, location, and certification requirement, then see who is current, who is expiring, and where follow-up is needed before onboarding, audits, or field work slow down.

FROM FEATURE

Training matrix, certification expiry, role-based assignment, and centralized training records.

TO BUYER MESSAGE

Know who is trained, who is expiring, and where compliance gaps are forming before they become operational problems.

WHY THIS ANGLE

The strongest message is not "manage training online." It is the operational relief underneath it: fewer gaps, clearer follow-up, and less audit stress.

HOW I WOULD VALIDATE

I would confirm the exact workflow, buyer persona, integration details, and claim boundaries with product and marketing before moving from draft messaging to campaign copy.

Application form summary: 13 months of hands-on brand copywriting experience, with adjacent experience in digital marketing, product development, content strategy, and audience-facing writing.
